

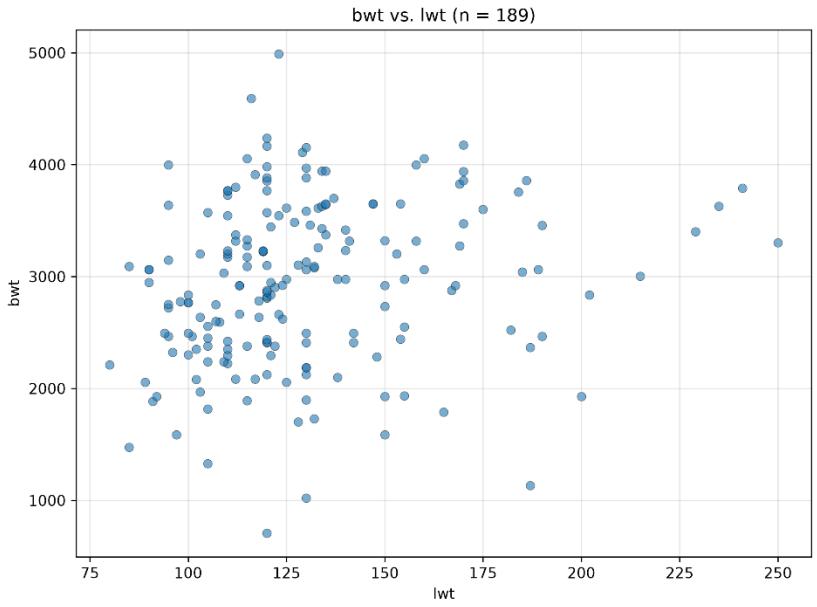

Figure 1

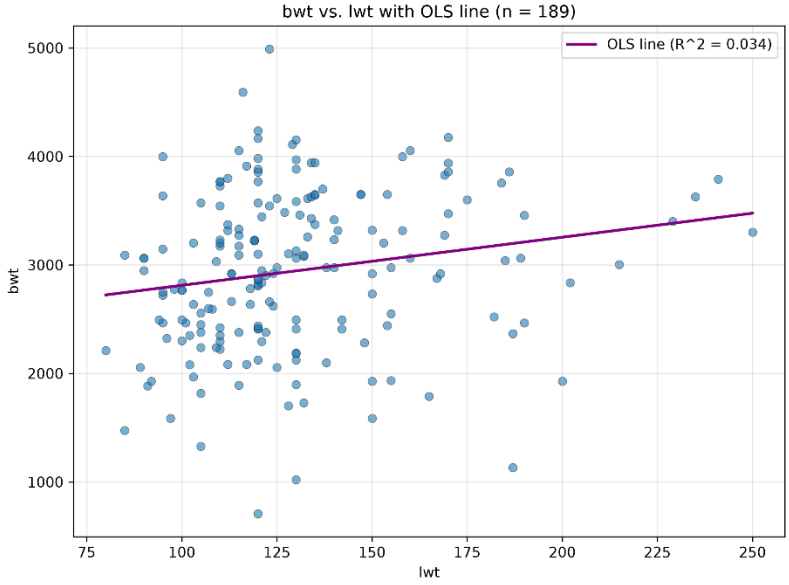

Figure 2

Independent variable: mother's weight in pounds (lwt)

Dependent variable: birthweight in grams (bwt)

R^2 value: 0.034

The scatterplot and regression line show a weak positive relationship between mother's weight in pounds and birth weight in grams.

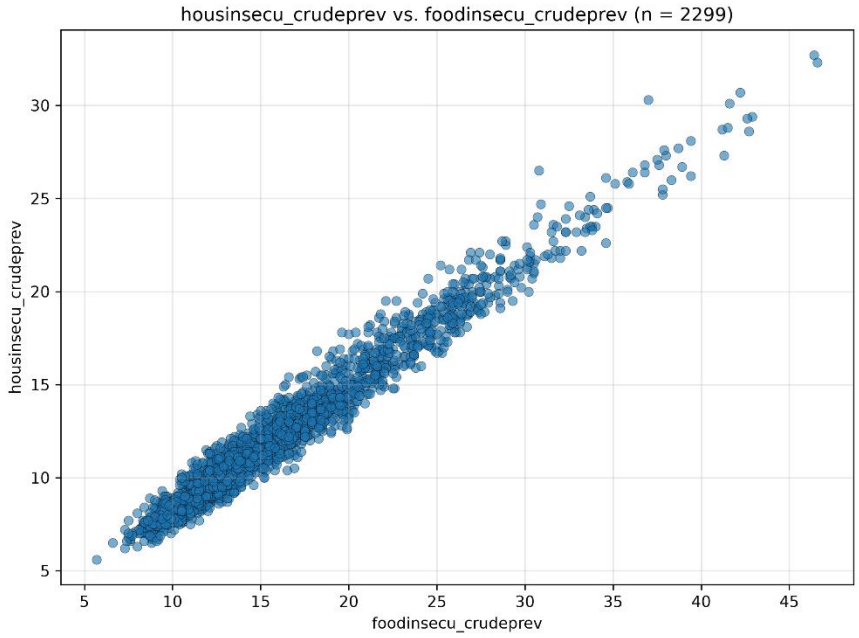

Figure 3

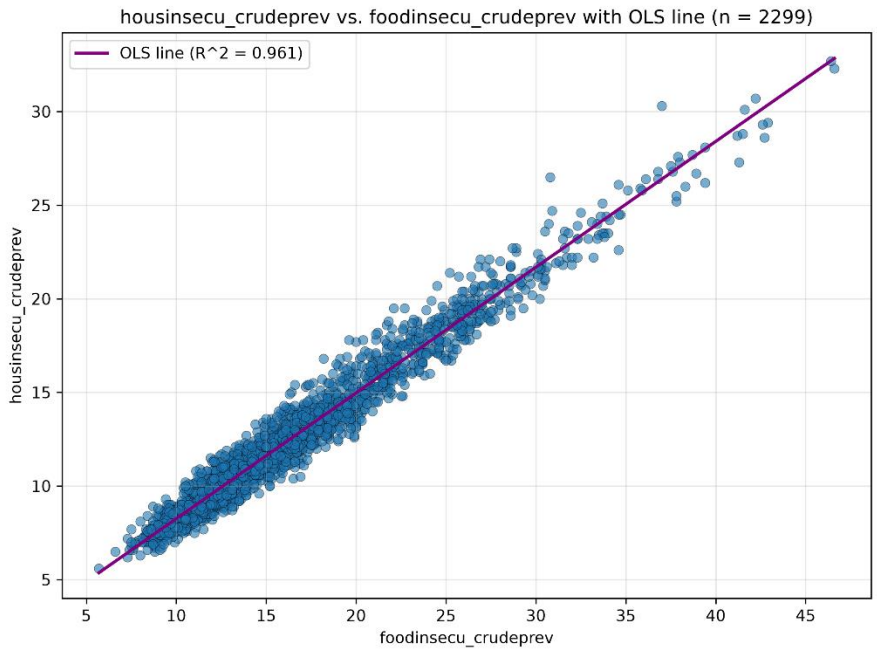

Figure 4

Independent variable: total population (totalpopulation)

Dependent variable: crude prevalence of housing insecurity (housinsecu_crudeprev)

R^2 value: 0.961

The scatterplot and regression line show a very strong positive relationship between food insecurity prevalence and housing insecurity prevalence.

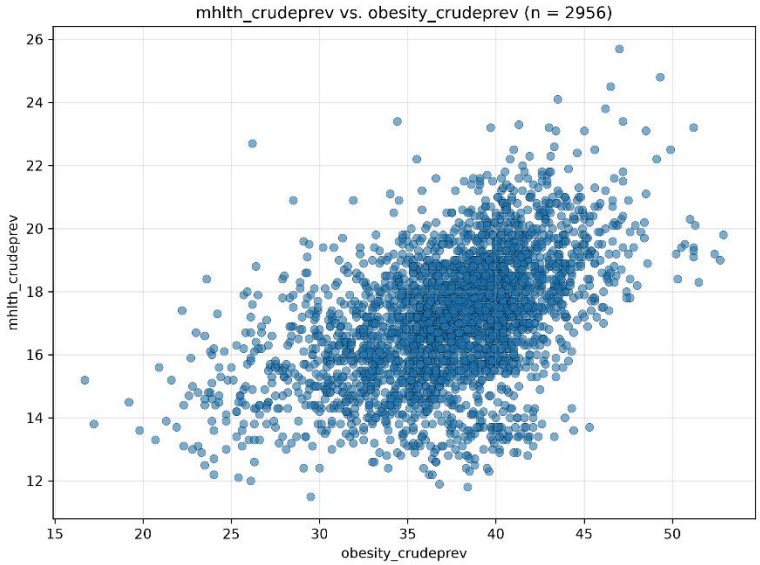

Figure 5

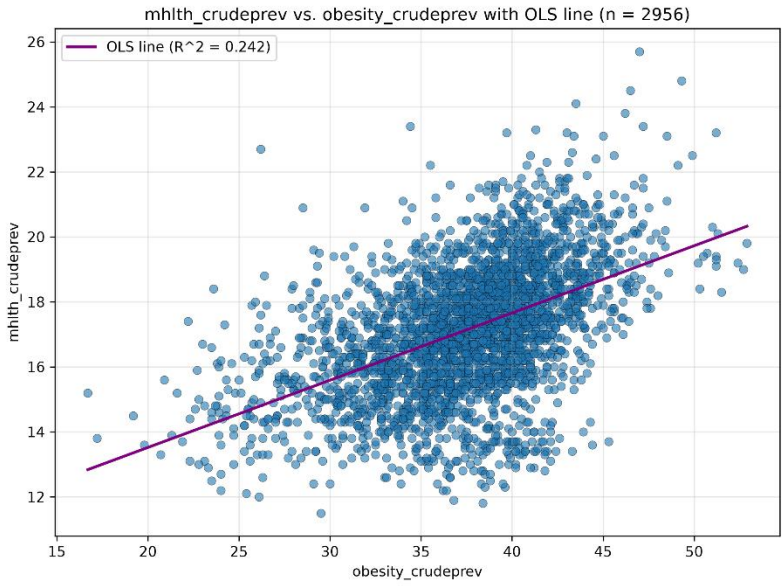

Figure 6

Independent variable: crude prevalence of obesity (obesity_crudeprev)

Dependent variable: crude prevalence of mental health disorders (mhlth_crudeprev)

R^2 value: 0.242

The scatterplot and regression line show a positive relationship between the crude prevalence of obesity and mental health disorders.
